Organisation overview:

The Bakery & Cafe is a modern bakery with three locations, offering freshly baked donuts, muffins, breads, cakes and drinks. The brand focuses on quality ingredients, daily freshness, and a warm café experience.

Vision Statement

Our vision is to become a go-to neighbourhood bakery known for creative, high-quality baked goods that bring people together and make everyday moments feel special.

Mission Statement

The Bakery & Cafe delivers fresh, small-batch baked goods across multiple locations, combining creativity with consistency. We focus on quality ingredients, efficient systems, and a strong customer experience so that every visit feels familiar, reliable, and worth coming back for.

Website Goals and Objectives

The primary goal of The Bakery & Cafe website is to promote its products and drive both online and in-store sales. The website aims to increase customer engagement by showcasing products and providing store information. Additionally, it seeks to build customer trust, encourage repeat visits and ensure a fast, user-friendly experience across all locations.

Current Website Analysis

The current bakery website shows its previous/current reviews, which is good for a potential customer to look at as it gains their trust. The website also has its different locations/stores for people to visit. A weakness could be that the website has too many pages and the pages have too much unnecessary content. My improvement would be decreasing the number of pages and keeping the content short and straight to the point, while ensuring that the people that visit the website find exactly what they're looking for.

Features and Functionality

As I plan to improve the website, there will be essential features I will be adding/upgrading.

Some of these features will be listed below:

Home page	It will welcome the visitors of the website and briefly show them what we are. It will also have a navigation bar that allows the user to go to different pages.
About us	It will tell the user about our bakery (our history, why we do what we do, etc.)
Contact us	This page shows the users the different ways they can get in touch with us
Menu	This is the page users will visit if they're interested in our products

Design and User Experience

The Bakery & Café's website uses a warm **brown** and **yellow** colour scheme to reflect its identity as a fresh, welcoming bakery brand. Brown represents richness, tradition, and quality, while yellow adds warmth, energy, and appetite appeal. The typography combines bold, readable headings with clean body text to maintain clarity and modern usability. The layout is structured and visually driven, with a strong focus on high-quality product imagery and simple navigation. From a user experience perspective, the website prioritises ease of use, mobile responsiveness, and clear access to key actions such as viewing products, locating stores, and placing orders.

Timeline

Week 1 (1-4 April): Choosing a target organisation

Week 2 (5-11 April): Researching on the organisation and doing a proposal on it

Week 3 (12-18 April): Creating the files for the webpages

→ Home page (13th April)

→ About us (14th April)

→ Menu (15th)

→ Contact us (16th)

→ Locations (17th April)

Week 4: Hand in Part 1

Budget

Site structure (8 pages, layout planning): R1,500 – R3,000
